Pathology Report

Patient: Meera Sharma

DOB: 15/06/1966

MRN: PATH-2024-0183

Specimen: Left breast core needle biopsy

Date Collected: 2024-01-15

Date Reported: 2024-01-18

GROSS DESCRIPTION:

Three core biopsies measuring 1.5 cm, 1.8 cm, and 1.2 cm in length.

All cores submitted for processing.

MICROSCOPIC DESCRIPTION:

Sections show invasive ductal carcinoma (IDC), Nottingham histologic grade 2 (moderately differentiated).

Tubule formation score: 2

Nuclear pleomorphism score: 2

Mitotic count score: 1

Total Nottingham score: 5/9

IMMUNOHISTOCHEMISTRY RESULTS:

ER: Positive (90%, strong intensity)

PR: Positive (70%, moderate intensity)

HER2: Negative (1+ by IHC)

Ki-67: 25%

DIAGNOSIS:

Invasive ductal carcinoma of the left breast, Grade 2.

Hormone Receptor Status:

ER Positive

PR Positive

HER2 Negative (Triple Negative status: Negative)

Pathologic Stage: pT2 (tumor size estimated 3.2 cm on gross)

COMMENTS:

All immunohistochemical stains have been reviewed.

Appropriate controls show expected results.
